11. Container With Most Water

Medium

Topics

Hint

You are given an integer array `height` of length `n`. There are `n` vertical lines drawn such that the two endpoints are $(i, \text{height}[i])$.

Find two lines that together with the x-axis form a container, such that the container contains the most water.

Return the maximum amount of water a container can store.

Notice that you may not slant the container.

Example 1:

Input: `height = [1,8,6,2,5,4,8,3,7]`

Output: 49

Explanation: The above vertical lines are represented by array `[1,8,6,2,5,4,8,3,7]`. The area of water (blue section) the container can contain is 49.

Example 2:

Input: `height = [1,1]`

Output: 1
